1b: Text Response

Does LK still work? Does it fall apart on any of the pairs? Try using different parameters to get results closer to the ones above. Describe your results and what you tried.

LK gets worse as the distance shifted increases. For example, from Shift_0 to Shift_r40, the optic flow is less accurate than the Shift_0 to Shift_R10. Blurring helps by increasing the k_size, however, it still is not as accurate, the image sets for 1b performed worse than the image sets of 1a even with blurring.

The parameters I've tried:

`k_size = 33` to `k_size = 39`

The accuracy of `k_size = 39` was better than `k_size = 33`, but the optic flow is still inaccurate.
